SCOPE OF WORK #7 NMCD - Residential Treatment Sex Offender Pages 64 and 65

Change From:

7. Assessment Phase

Consists of a comprehensive clinical interview of each referred offender, review of other reports and evaluation as available, completion of questionnaires, and an objective measure of sexual interest; the Abel Assessment. Individual treatment goals are developed by therapist based on individual offender assessment and Abel Assessment results. Polygraph exam may be required.

9. Intensive Treatment Phase: Offenders work on individual treatment goals in a group setting. The group treatment content is divided into ten (10) different psycho-educational modules of six sessions each. Each group meets weekly for one (1) and three (3) one-half (1½) hour sessions with a maximum of twelve (12) offender. Service Provider shall provide treatment, for the full allotted time, to all offenders referred by NMCD,

10. Reassessment Phase: Upon conclusion of the Intensive Treatment Phase, Service Provider evaluates whether the offender has met his treatment goals and is ready for maintenance phase. Reassessment is conducted in individual session(s) and may include repeat of the Abel Assessment.

12. Discharge Plan: The Service Provider shall develop a discharge plan for each offender after the completion of the (third year) quarterly Maintenance Phase of treatment.

Change To:

7. Assessment Phase

Consists of a comprehensive clinical interview of each referred offender, review of other reports and evaluation as available, completion of questionnaires, and an objective measure of sexual interest; the Abel Assessment (*if needed*). Individual treatment goals are developed by therapist based on individual offender assessment and Abel Assessment (*if needed*) results. Polygraph exam may be required.
